The C&A Label Generator is just that, it generates labels from Sage BusinessWorks for Customers, Parts, Parts related to a Job, Parts related to a Sales Order, Parts related to a Purchase Order and Vendors. The program has a small footprint on the desktop and can easily be open all the time. Designed to be used in either the warehouse where barcodes are added to each new arriving part or in the front office where labels are being printed for mailing brochures and information to customers and prospects. Prints directly to Dymo or *virtually any label printer*. Print just the number of labels you want. If you chose the Dymo printer it will also be available to your ACT! software for printing mailing labels for leads and prospects when they request information. This label printing software is a long needed addition to the Sage BusinessWorks program.

A variety of Dymo & Bartender print templates for Sage BusinessWorks are included and labels come in many sizes, shapes and forms to meet your company's unique labeling needs.

Typical Procedure to Print Part Labels

- The user will first choose the Label Template from a drop down list. This only needs to be done once until the user desires a different label.
- The user will then simply choose the option for PARTS.
- Then:
 - Choose the part (*or parts for a range*) from a drop-down just like in Sage BusinessWorks.
 - Or choose a Job Phase: *Will auto print all parts in phase.*
 - Or choose a Sales Order: *Will auto print all parts in the Sales Order.*
- Choose the number of labels and push the print button.
- The label printer will print out the number of labels you wanted in an easy to apply strip.
- To repeat the process click on the OK button and you return to Label Options.

Simple! Clean! Quick
