

e-Commerce Interface Solution **for Sage BusinessWorks Accounting 50**

Your customer enters an order in your web shopping cart.

The sales order is downloaded in less than 2 min. into BusinessWorks on your server.

The warehouse staff prints a pick ticket, fills the boxes and ships the product before the accounting office sees the order.

No more hand entry of sales orders, no more errors and greatly reduced labor costs.

The C&A e-Commerce Interface Solution is a powerful but yet simplistic collection of three interdependent programs that import the sales orders and customer information from a web shopping cart directly into SAGE BusinessWorks on a 24/7 basis. This e-Commerce Interface Solution is designed for growing companies who no longer can afford to hand re-enter sales order after their customers have already entered them on the web. If your company is experiencing 25 or more sales orders per day from your shopping cart you need the C&A e-Commerce Interface Solution.

- Imports sales orders from your web shopping cart in less than 2 min. from the time your customer pushes the "Submit" button..
- Eliminates costly hand entry errors.
- Sales orders are ready for your warehouse staff on a 24/7 time basis. No more waiting for an accounting clerk to "download sales orders".
- Reduces labor costs.
- Increases efficiencies.
- Keeps customer information like billing address, phone numbers and email addresses current in BusinessWorks when a customer makes changes on the web.
- Unlimited technical phone support and training.
- We work directly with your webmaster to guide them through the process of creating the proper output files and pushing them to your server.
- BusinessWorks version specific. Updated each year to meet all new enhancements in BusinessWorks.
